

Student Life Automation Platform

A smart bridge between academic learning and industry expectations.

The Problem ⚠️

- **The Gap:** Students struggle to match their skills with rapidly evolving industry requirements.
- **Fragmentation:** Academic curricula often lag behind real-world job market demands.
- **Uncertainty:** "What should I learn next?" "Are my projects good enough?"

Our Solution 💡

A comprehensive platform that:

1. **Analyzes:** Understands a student's profile (GitHub, LinkedIn).
2. **Identifies:** Maps current abilities against live job market data and uncovers skill gaps.
3. **Guides:** Generates personalized, actionable learning roadmaps.
4. **Suggests:** Recommends AI-curated hands-on projects to build out missing skills.

What We Are Using

Frontend:

- UI built with **React** (`react` , `react-dom`)
- Bundled and structured using **Vite** for blazing fast performance
- Vanilla **CSS** for custom, engaging visual aesthetics

Backend:

- **Python** (Virtual environment configured) for robust data processing

Currently Built Components:

- Dashboard interface (`Dashboard.jsx` , `Dashboard.css`)
- Visual skill gap analysis (`SkillGapVisualizer.jsx`)
- Roadmap guidance (`RoadmapRecommendations.jsx`)

Current Architecture

```
student_analysis/  
├── backend/           # Python Services (API, AI logic)  
│   └── venv/          # Virtual environment  
├── frontend/         # React SPA  
│   └── src/  
│       ├── App.jsx    # Main entry  
│       └── components/ # Specialized UI elements  
│           ├── Dashboard.jsx  
│           ├── SkillGapVisualizer.jsx  
│           └── RoadmapRecommendations.jsx
```

How it Works

1. **User Profile Ingestion:** Connect academic history and coding portfolios.
2. **Market Evaluation Engine:** Compare ingested skills against updated job requirements.
3. **Skill Gap Visualizer:** Easily understand where you currently stand.
4. **Actionable Deliverables:** Receive a recommended list of tailored projects.

Future Roadmap

- **Integration:** Pluggable integrations for LinkedIn/GitHub APIs.
- **AI-Powered Recommendation:** Refine project suggestions using dynamic AI.
- **Progress Tracking:** Continuous monitoring of the student's journey.

(Note: This presentation will be maintained and updated as the project evolves)

Thank You! 

Bridging the gap between students and the industry.
